

Projects

ADIL is an established provider of full field development services to the oil and gas industry. Our experienced personnel coordinate all elements of a project to ensure the seamless integration of the subsurface, drilling, facilities, HSE, cost, planning, regulatory and commercial activities. We have managed projects from the earliest stages of appraisal through to, and including, production operations. ADIL is currently providing field development services for projects with CAPEX in excess of £1Bn.

Most of our staff have 20-30 years experience in the oil and gas industry and many have operator and international experience. We also offer independent peer review teams to review a project at any stage, utilising our own independent processes if required.

Delivering Offshore Developments

ADIL provides the project management services required for delivery of a wide range of developments, safely, on time, and within budget. Our experienced personnel coordinate all elements of a project to ensure the seamless integration of the subsurface, drilling, facilities, HSE, cost, planning, regulatory and commercial activities by means of our in-house Development Delivery Process. We have managed developments from the earliest stages of appraisal through to first production and production operations.

Typically headed by a senior project manager our project teams take full responsibility for delivery of all aspects of a development from conceptual engineering design through to commissioning and handover, including the interface and coordination of drilling and topside modifications. This includes the management of contractor teams, equipment manufacturers and client contracts.

ADIL's capability has been demonstrated by the successful delivery of two fast track field development projects from appraisal to start up, and we are currently managing six other projects at various stages in the development cycle.

Our project teams are supported by the full breadth of the other in-house ADIL resources which include supply chain management, project services, operations and HSEQ. They also enjoy the benefit of working with established and proven management systems which are integrated across the company to ensure an efficient and reliable service.

Peer Review

ADIL can provide a multi-disciplinary team to review a project at any stage:

- to carry out due diligence on an acquisition
- at appraisal
- at concept selection
- prior to sanction
- operational readiness
- for lessons learned after completion

Typically the peer review team will be headed by one of our senior project managers and will use ADIL's own proven processes to carry out the review.

Any development review can also include expertise from our Operations Management team to review the stewardship of the field / facility for the correct balance of HSE, production and cost factors.

Project Services

As well as providing project services as part of an integrated project team ADIL can provide independent support in the following areas:

- cost and schedule support to a client's construction team
- audit of fabricator's/contractors' costs and schedules
- assistance with recovery plans
- information management and document control (either in house or on a client's server/systems for ongoing or project specific needs)
- technical assistance

Fabrication and Construction Audits

ADIL can provide an individual person or a multi-disciplinary team to supplement or represent a client's fabrication / construction management team. The service is infinitely flexible and the following is just an example of what we can provide in respect of trees, modules, manifolds, package units, complete platforms, FPSOs, prototypes, hot tap preparation etc:

- assessment of a fabricator's or contractor's set-up and capability
- part time additional resources to a client's own fabrication/management team
- review of HSE and QA/QC plans
- factory or site inspection services
- regular progress visits or audits
- advice to a client on suitable recovery plans
- Ready to sail / Ready to load out reviews
