

Case study

Opportunity framing support

Project details

 **Start date** 2014

 **End date** 2014

 **Location** West of Shetland

Overview

ADIL's client was aggressively establishing a position in the West of Shetlands region with the intent of developing a strategic heartland.

Prior to the client finalising equity share and achieving operatorship, ADIL helped the client rationalise a complex investment scenario and understand what to do as an integrated team.

A series of staged opportunity framing events were held with the client, covering:

- Subsurface integrated modelling opportunity framing
- Option and value to accelerate de-risking drilling appraisal programme
- Immediate near field potential strategic framing
- Concept development opportunity framing
- Regional near field strategic framing, subject to further acquisition

ADIL approach

- ADIL deployed two senior consultants, each with over 30 years' operator and consulting experience, who are deeply experienced in this type of development investment situation
- They engaged with the client, understood their needs, and developed an opportunity framing approach as a fine tuned development of ADIL's decision based opportunity framing methodology

ADIL deployed two senior consultants, each with over 30 years' operator and consulting experience.

Deliverables

The workshop delivered the following, which enabled the client to efficiently progress as an aligned team:

- Detailed 90 day plan
- Key forward decisions and activities through assess, select and post select project stages
- Items for transfer to other client parties outwith the direct project team
- Stakeholder management plan
- Wide ranging early lifecycle concept development table, conditioned by a range of potential subsurface realisations
- Subsurface realisations impact and ability to reduce table
- Feed to overall project risk and opportunity register
